

Olugbemi Daniel Adeiza

Frontend Engineer | Translating Identity Into Digital Experiences

+234 703 042 8457 | email: gbemidaniel01@gmail.com | website: gbemidaniel.vercel.app | github: github.com/GbemiDaniel

Enugu / Remote | Nigeria

PROFILE

Frontend Engineer specializing in translating brand identity and product direction into intentional, production-ready digital experiences. I work across design and engineering to build interfaces that reflect who a brand is while maintaining usability, clarity, and strong visual direction. My experience spans collaborative internship work, client-facing projects, and independent product development from concept to deployment.

PROFESSIONAL EXPERIENCE

Frontend Engineer | Freelance and Independent Work

Dec 2025 – Present

Self-Directed | Nigeria

- Designed and built client-facing websites for real professionals, translating brand briefs and visual identities into deployed, production-ready frontend systems.
- Delivered production-ready frontend systems across multiple projects with emphasis on responsive architecture, interaction design, and scalable UI implementation.
- Integrated third-party APIs including OMDb, Google Maps, and custom JSON servers, with async state handling, loading states, and error boundaries.
- Built and maintained a personal portfolio system used as both a live product showcase and an ongoing design and engineering reference point.

Frontend Engineering Intern

Nov 2025 – Dec 2025

Programmify Academy | Nigeria (Team Environment)

- Collaborated with a cross-functional intern team to design and deliver SkillzBloom, a student growth platform helping users track learning progress, manage tasks, and develop practical skills.
- Owned and built the Skills module end-to-end, including the acquired skills tracker, skills-in-progress feed, and proficiency dashboard cards displaying real-time user statistics.
- Built reusable TypeScript and React components with Tailwind CSS, maintaining visual consistency and code modularity across the platform.
- Worked within a Git/GitHub team workflow, raising pull requests, participating in code reviews, and managing feature branches through to merge.

SELECTED PROJECTS

Handshakers | Team Time Tracking and Payout Platform

Jul 2026 – Sep 2026

Full-Stack Product Build

Stack: React.js, Next.js, Tailwind CSS, Supabase, SWR, Framer Motion

- Built a real-time team time-tracking and payout platform on Next.js and Supabase that logs entries on a shared timeline and calculates each member's prorated payout hours to three decimal places.
- Implemented live presence and collision warnings with Supabase Realtime and SWR polling, so teammates see who is logging time and every client stays in sync without manual refreshes.
- Secured the app with Supabase Auth, row level security, and admin and member roles, with timeline and pool cap validation and admin rollback of mistaken entries.
- Designed a responsive dual-theme interface with a timeline visualizer and an animated stained glass background, and added Vitest tests for the sync hooks and time calculator.

ChronoVault | Web3 Digital Time Capsule

May 2026 – Jun 2026

Collaborative Project | Frontend Developer

Stack: React.js, Next.js, Tailwind CSS, Framer Motion

Live: chronovault-mvp.vercel.app

- Delivered a responsive frontend MVP of a Web3 digital time capsule by translating a Figma design into a Next.js application, covering a landing page, a dashboard with a capsule creation flow, an Activity Ledger history page, and settings and notifications pages, all running on simulated vault data.
- Built a motion-driven interface with Framer Motion scroll reveals and page-load transitions, plus a CSS keyframe space background that runs outside the React render path.
- Structured the app for production with route-level error and loading states, SEO and Open Graph metadata, and deployment on Vercel.

Thrifty | Fashion Ecommerce Platform

April 2026 – Present

In Progress | Independent Product Build

Stack: React.js, Next.js, Tailwind CSS, Supabase, Scalable UI Architecture

- Building a full-stack fashion ecommerce platform on Next.js and Supabase, pairing a storefront with search, filtering, sorting, pagination, and cart and wishlist state with an admin dashboard, all on a scalable component architecture suited for catalog-scale product display.
- Built role-based access control with Supabase Auth and Next.js middleware, so only admin accounts can reach the dashboard while customers stay on the storefront.
- Built an admin product catalog with create, edit, and delete flows, a rich text description editor, and an image pipeline that compresses uploads in the browser before storing them in Supabase Storage.
- Applying product thinking to the build, with information architecture, user flow, and visual hierarchy decisions made with brand alignment and usability in mind.

SkillzBloom | Student Growth Platform

Nov – Dec 2025

Internship Collaboration | Programmify Academy

Stack: TypeScript, Tailwind CSS, Clerk Auth, Git/GitHub

Live: skillz-bloom-jade.vercel.app/skills

- Built the Skills module end-to-end, including the acquired skills tracker, skills-in-progress feed, and proficiency dashboard cards showing real-time user statistics.
- Designed a reusable card component system used across the Overview and Skills pages, maintaining visual consistency throughout the platform.
- Collaborated via Git pull requests and code reviews within a structured intern team workflow, shipping to a shared production codebase.

SKILLS

Core: React.js, Next.js, TypeScript, JavaScript (ES6+)

UI Engineering: Tailwind CSS, Framer Motion, Responsive Design, Component Architecture, Figma-to-Code Implementation

Data & State: REST APIs, Async State Management, React Hooks, Supabase

Tooling: Git, GitHub, Vercel, DevTools

EDUCATION

BSc Computer Science:

2018 – 2024

University of Nigeria, Nsukka (UNN) | Enugu State

Relevant coursework: Data Structures and Algorithms, Object-Oriented Programming, Web Development, Database Management Systems
